

PROBLEM STATEMENT

Team ID	PNT2022TMID27335
Project Name	Skill / Job Recommender Application

1. Job seekers may be a student expecting for internship or a fresher with no experience or a well experienced professional
2. They are expected to search manually by visiting the companies or the particular websites which consumes more time
3. There are a lot of fake job uploaded or duplicate job profiles present which causes chaos
4. They are made to search and go through each job description to find if it is appropriate for their skillset
5. When the user searches they might end up getting a job profile which is much lesser than their expected requisites
6. This is why we are providing a user friendly interface that is smooth for the user to search jobs with similar skill sets
7. The chat-bot present will assist the user to proceed with the help or queries that arise
8. Users need to spend a lot of time in their systems or mobile to keep updating themselves by the job postings
9. Many users loose valuable job offers as they haven't applied at the correct time
10. This is where the alert mechanism is going to help the user by sending an alert message or notification according to the skillset they have sent.
